

# e-CUSTOM

**A DIGITAL ACCOUNTANT TO  
VERIFY, REGISTER & EVALUATE  
YOUR TARIFFS**

# VISION

Our focus is to collaboratively create technology solutions for profitable business.

# MISSION

With the power of talent and innovation that our team brings on the table, we provide our customers with high quality, relevant and customised technological solutions, which are easy, economical and safe to use.

## CHALLENGES AND NEED FOR THE SOFTWARE

**QUITTANCE-** It becomes difficult to calculate and keep a record of how much custom duty tax collection is done by each post at different levels.

**TRANSIT PERMIT-** Current system makes it difficult to track the vehicles entering from outside the country.

**ESCORT-** It becomes complicated to maintain the record and tracking of goods coming in and going out of the country. This often leads to leakage and illegal distribution of goods.

**DEPOT-** Authorities have to do the valuation of goods seized and deported. The current system doesn't facilitate smooth record keeping system.

**PENALTIES-** If required, authorities impose fine and penalties on goods and vehicles. Calculating and charging the penalty on goods and vehicles becomes sluggish and gets delayed because of manual system.

**CONNECTIVITY-** Connecting all the posts with each other and the head office to facilitate reports submission and sharing becomes difficult due to scattered locations.

## We've arrived with the solution - e-Custom

1

*It allows data sharing by connecting even the remotest posts with the head office.*

2

*It reduces the formalities-related costs.*

3

*It improves the overall working quality by automating the entire manual process.*

4

*It eliminates the prevailing dominance and necessity of paper work by digitising the entire system.*

5

*It provides greater control and authority by enabling tracking of vehicles and goods, keeping their records and maintaining reports.*

# PROCESS-WISE FEATURES

## Quittance

e-Custom provides full control over the quittance process by:

- Verifying and registering any material coming within the country at the post itself.
- After the registration, the material goes through evaluation and authorization before the final payment is deposited.
- The entire process becomes lucid and transparent.

## Transit Permit

- The permit is applicable to all the vehicles entering into a nation from other countries, either travelling or crossing the country, whether carrying commercial goods or not.
- e-Custom enables tracking of vehicle's movement within the country.
- In case a vehicle stays inside the country beyond the time limit, e-Custom will generate and circulate the alerts to the system administration as well as the concerned authorities at the posts.

## Escort

- Making it necessary for all the vehicles entering the country from outside, carrying the material meant for sale outside the country's territory to get an escort.
- The system appoints an escort to the vehicle to make sure that the material is transported to the destination without any leakage.

## Depot

Custom departments have the authority to depot any goods if required. Depots are of two types:

**Permanent**- which includes illegal and banned goods

**Temporary**- which includes regular goods seized due to non-payment of custom clearance

There are certain goods which are restricted within the country; hence these goods are seized by the custom authorities. Sometimes goods are seized due to non-payment of custom duty. In this case, authorities seize the goods until the payment is made.

Similarly, authorities seize the illegal vehicles, or the vehicles which doesn't have proper documents, or vehicles which are late in permit. These vehicles and goods are stored in a depot.

e-Custom enables the authorities to maintain digital records of the goods and vehicles seized, along with the categorization of goods seized.

It also enables the authorities to do the evaluation of goods and maintain records to enable authorities to generate reports and share them with the other posts as well as with the head office.

# THE SOLUTION - E-CUSTOM

Our proposed software has numerous benefits and advantages over the current system. These are-

- Automates the entire system
- Reports could be generated any time
- Eliminates the need of book keeping system by providing access to the reports any time you want.
- Leads to data accuracy and efficiency.
- Eliminates the delay in work by providing smooth pace to the entire process.
